### **Discharging driver and entrepreneur from liability**

The driver goes up on a safe and non-slip stair with steel grating surface in order to clean the roof of the vehicle fast and comfortable from dangerous roof load. The driver and entrepreneur will be discharged from the liability of falling loads and the traffic will become safer. As specialist of ascending and scaffold technics we have developed as solution which unifies a lot of further advantages.

Who does not know this: Somebody is driving behind a truck, during starting, in a curve or while increasing the speed, suddenly big quantities of snow and ice are falling from the truck roof on the roadway or the vehicle. Ad dangerous situation for all parties – often with fatal consequences.

### **Safe working during all seasons**

Entrepreneur and vehicle driver are obligated according to the road traffic act to prune the roof from dangerous roof loads before starting. Entrepreneurs must train their staff members preventively. If not, consequences will threaten in case of a damage event. Especially in case of utility vehicles, it is difficult to reach the roof – especially under unfavourable weather conditions.

### **Scaffold can be extended in length and height**

The approximate 3 m height stationary „Ice-free scaffold“ with steel grating steps, non-slip steel perforated metal plate platforms and a stable rail is very safe in the usage – also in case of bad weather conditions. The scaffold is conceived as stationary scaffold and can be fitted in the length depending on the space situation. This ensures a safe backing and an easy usage.

The scaffold can be extended in the length and the height and fits into all available pitch situations. The system offers also in the summer months the possibility to reach the roof space fast and easily for cleaning works and maintenance works.
